

BASIS OF HUMAN ANATOMY

M.C.Q's

- 1- The following statement describes the anatomical position:**
 - a- The eyes are looking backwards.
 - b- The upper limbs are hanging by the sides.
 - c- The palms are facing backwards.
 - d- The thumbs are directed medially.
- 2- Anatomical position is:**
 - a- A term used referring to the body facing forwards and sitting down.
 - b- The position in which the body is lying down with feet parallel and arms by the sides.
 - c- The position in which the body is erect, facing front with feet parallel and arms hanging at the sides with the palms facing forwards.
 - d- The position in which the body is erect, facing forward with feet parallel and arms hanging at the sides with palms facing backwards.
- 3- The plane which divides the body into 2 equal halves right and left is:**
 - a- Median plane
 - b- Coronal plane
 - c- Paramedian plane
 - d- Horizontal plane
- 4- Which of the following is true about the coronal plane?**
 - a- It is a horizontal plane.
 - b- It divides the body into anterior and posterior halves.
 - c- It cuts the body into upper and lower halves.
 - d- It is a vertical plane that divides the body into 2 equal right and left halves.
- 5- The anatomical term that means "away from the median plane" is:**
 - a- Lateral.
 - b- Medial.
 - c- Distal.
 - d- Proximal.

6- The anatomical term that means "nearer to the root of the limb" is:

- a- Lateral.
- b- Medial.
- c- Distal.
- d- Proximal.

X 7- The superficial layer of the skin is composed of which type of tissues:

- a- Simple columnar epithelium.
- b- Stratified squamous epithelium.
- c- Dense fibrous tissue.
- d- Stratified columnar epithelium.

X 8- The type of tissue that makes up the bulk of the dermis is:

- a- Collagen.
- b- Melanin.
- c- Keratin.
- d- Fibroplastin.

9- One of the functions of superficial fascia is:

- a- Presence of skin muscles.
- b- Formation of aponeurosis.
- c- Formation of broad sheets.
- d- Formation of interosseous membranes.

10- One of the functions of deep fascia is that it:

- a- Facilitates the movement of the skin.
- b- Prevents heat loss from the body.
- c- Contains many types of glands.
- d- Forms the interosseous membranes.

11- The intermuscular septa and interosseous membranes:

- a- Surround the muscles of the upper and lower limbs.
- b- Separate different groups of muscles which have different actions.
- c- Are transverse thickened bands of deep fascia present at wrist joint.
- d- Form tough sheaths around big blood vessels.

12- The retinacula:

- a- Surround the muscles of the upper and lower limbs.
- b- Separate different groups of muscles which have different actions.
- c- Are transverse thickened bands of deep fascia present at wrist joint.
- d- Form tough sheaths around big blood vessels.

-
- 13- Yellow elastic fibrocartilage is present in:**
- a- Developing bone of the fetus.
 - b- Auricle of the ear.
 - c- Articular cartilage of joints.
 - d- Symphysis pubis.
- 14- White fibrocartilage is present in:**
- a- Epiglottis.
 - b- Auricle of the ear.
 - c- Articular cartilage of joints.
 - d- Intervertebral disc.
- 15- Hyaline cartilage is present in:**
- a- Epiglottis.
 - b- Auricle of the ear.
 - c- Articular cartilage of joints.
 - d- Intervertebral disc.
- 16- Appendicular skeleton is formed of:**
- a- Skull and mandible.
 - b- Bones of the upper and lower limbs.
 - c- Ribs and sternum.
 - d- Vertebral column.
- 17- Intra-membranous ossification occurs in:**
- a- Clavicle.
 - b- Vertebrae.
 - c- Ribs.
 - d- Base of the skull.
- 18- Intra-cartilagenous ossification occurs in:**
- a- Roof of the skull.
 - b- Clavicle.
 - c- Skull cap.
 - d- Vertebrae.
- 19- The expanded upper and lower ends of the long bone are called:**
- a- Epiphysis.
 - b- Epiphyseal plate.
 - c- Diaphysis.
 - d- Metaphysis.

-
- 20- The compact bone with a central medullary cavity is called:**
- a- Epiphysis.**
 - b- Epiphyseal plate.**
 - c- Diaphysis.**
 - d- Metaphysis.**
- 21- The part which is responsible for the growth of long bones in length is called:**
- a- Epiphysis.**
 - b- Epiphyseal plate.**
 - c- Diaphysis.**
 - d- Metaphysis.**
- 22- The scapula is a:**
- a- Short bone.**
 - b- Long bone.**
 - c- Flat bone.**
 - d- Seasamoid bone.**
- 23- The ribs are:**
- a- Short bone.**
 - b- Long bone.**
 - c- Flat bone.**
 - d- Seasamoid bone.**
- 24- The Paranasal sinuses are:**
- a- Short bone.**
 - b- Long bone.**
 - c- Flat bone.**
 - d- Pneumatic bones.**
- 25- The patella is a:**
- a- Short bone.**
 - b- Long bone.**
 - c- Flat bone.**
 - d- Seasamoid bone.**

-
- 26- What is the type of joint that connects the roots of the teeth to their sockets?**
- a- Gomphosis.
 - b- Sutures.
 - c- Cartilagenous.
 - d- Synovial.
- 27- What is the type of joint that connects the bones of the skull?**
- a- Gomphosis.
 - b- Sutures.
 - c- Cartilagenous.
 - d- Synovial.
- 28- What is the type of joint present at the ends of the growing long bones?**
- a- Fibrous.
 - b- Primary cartilaginous.
 - c- Secondary cartilaginous.
 - d- Synovial.
- 29- What is the type of joint of the intervertebral discs?**
- a- Fibrous.
 - b- Primary cartilaginous.
 - c- Secondary cartilaginous.
 - d- Synovial.
- 30- One of the following joints is uniaxial:**
- a- Shoulder.
 - b- Wrist.
 - c- Elbow.
 - d- Knee.
- 31- One of the following is biaxial joint:**
- a- Shoulder.
 - b- Hip.
 - c- Elbow.
 - d- Knee.

32- One of the following is a polyaxial joint:

- a- Hip.
- b- Knee.
- c- Wrist.
- d- Superior radioulnar.

33- The shoulder joint is:

- a- Hinge.
- b- Ellipsoid.
- c- Bicondylar.
- d- Ball and socket.

34- The elbow joint is:

- a- Hinge.
- b- Ellipsoid.
- c- Bicondylar.
- d- Ball and socket.

35- The wrist joint is:

- a- Hinge.
- b- Ellipsoid.
- c- Bicondylar.
- d- Ball and socket.

36- The hip joint is:

- a- Hinge.
- b- Ellipsoid.
- c- Bicondylar.
- d- Ball and socket.

37- The skeletal muscles are:

- a- Involuntary.
- b- Present in the heart.
- c- Present in the wall of blood vessels.
- d- Attached to the bones.

38- The smooth muscles are:

- a- Voluntary.
- b- Present in the heart.
- c- Present in the wall of blood vessels.
- d- Attached to the bones.

-
- 39- An example of strap-like muscle is:**
- a- Rectus abdominis.
 - b- Sartorius.
 - c- Deltoid.
 - d- Supinator.
- 40- An example of strap-like muscle with tendinous intersections is:**
- a- Sartorius.
 - b- Deltoid.
 - c- Rectus abdominis.
 - d- Tibialis anterior.
- 41- An example of multipennate muscle is:**
- a- Deltoid.
 - b- Tibialis anterior.
 - c- Rectus anterior.
 - d- Supinator.
- 42- An example of bipennate muscle is:**
- a- Rectus abdominis.
 - b- Rectus femoris.
 - c- Sartorius.
 - d- Deltoid.
- 43- The right atrium receives blood from:**
- a- Superior and inferior vena cava.
 - b- Pulmonary artery.
 - c- Aorta.
 - d- Pulmonary veins.
- 44- Regarding the systemic circulation, which of the following statements is true?**
- a- The blood passes from the right ventricle to the right atrium.
 - b- Oxygenated blood is collected by the veins into the right atrium.
 - c- Deoxygenated blood passes through the aorta to all tissues of the body.
 - d- Oxygenated blood passes through the aorta to all tissues of the body.

45- Regarding the pulmonary circulation, which of the following statements is true?

- a- The blood passes from the right ventricle to the right atrium.
- b- Oxygenated blood is collected by the veins into the right atrium.
- c- Oxygenated blood returns from the lung to the left atrium.
- d- Deoxygenated blood passes through the aorta to all tissues of the body.

46- Regarding the portal circulation, which of the following statements is true?

- a- The venous blood from the digestive system enters the liver through the portal vein.
- b- The venous blood leaves the liver through the portal vein.
- c- The venous blood from the digestive system enters the liver through the hepatic vein.
- d- The venous blood enters the liver through the inferior vena cava.

47- The thoracic duct drains:

- a- The right side of the head and neck.
- b- The right lower limb.
- c- The right upper limb.
- d- The right half of the thorax.

48- The right lymphatic duct drains:

- a- The whole body below the diaphragm.
- b- The right lower limb.
- c- The right upper limb.
- d- The right half of the abdomen.

49- The brain stem consists of:

- a- 2 cerebral hemispheres.
- b- Midbrain, pons, cerebellum.
- c- Midbrain, medulla oblongata.
- d- Mid brain, pons & medulla oblongata.

50- The segments of the spinal cord are:

- a- 8 cervical, 10 thoracic, 5 lumbar, 5 sacral and one coccygeal.
- b- 10 cervical, 12 thoracic, 5 lumbar, 5 sacral and one coccygeal.
- c- 8 cervical, 12 thoracic, 5 lumbar, one sacral and one coccygeal.
- d- 8 cervical, 12 thoracic, 5 lumbar, 5 sacral and one coccygeal.

51-If you are asked to draw a section through the human body that demonstrates the heart and both lungs, which of the following planes would be appropriate for your section?

- a- Horizontal plane.
- b- Lateral sagittal plane.
- c- Paramedian plane.
- d- Median plane.

52-Near to the median plane is:

- a- lateral.
- b- proximal.
- c- medial.
- d- inferior.

53-Deep fascia :

- a. Strong and thick in the anterior abdominal wall.
- b. More thickened in females than in males.
- c. Contains small amount of fat.
- d. Absent in the face.

54-The retinacula:

- a. Expand the origin of muscles.
- b. Separate different compartments of the limbs.
- c. Keep the underlying tendons in position
- d. Are found around the knee.

55- Appendicular skeleton includes:

- a. Skull and mandible.
- b. Bones of the limbs.
- c. Ribs and sternum.
- d. Vertebral column.

56- The type of cartilage in the tip of the nose is:

- a. hyaline cartilage.
- b. white fibrocartilage.
- c. yellow elastic fibrocartilage.
- d. no cartilage at all.

MODEL ANSWERS

1-	b	15-	c	29-	c	43-	a
2-	c	16-	b	30-	c	44-	d
3-	a	17-	a	31-	d	45-	c
4-	b	18-	d	32-	a	46-	a
5-	a	19-	a	33-	d	47-	b
6-	d	20-	d	34-	a	48-	c
7-	b	21-	b	35-	b	49-	d
8-	a	22-	c	36-	d	50-	d
9-	a	23-	c	37-	d	51-	a
10-	d	24-	d	38-	c	52-	c
11-	b	25-	d	39-	b	53-	d
12-	c	26-	a	40-	c	54-	c
13-	b	27-	b	41-	a	55-	b
14-	d	28-	b	42-	b	56-	c

FILL IN THE BLANKS

- 1- The position which is used as a reference in describing human body is called
- 2- The plane which divides the body into 2 equal halves right and left is called
- 3- The vertical plane which is perpendicular on the median plane is called
- 4- Near to the front of the body is
- 5- Near to the back of the body is
- 6- Near to the median plane is
- 7- Away from the median plane is
- 8- Approximation of 2 ventral aspects is
- 9- When the 2 ventral aspects move away from each other it is called
- 10- Movement towards the median plane is
- 11- Movement away from the median plane is
- 12- Lateral rotation of forearm is
- 13- Medial rotation of forearm is
- 14- When the sole of foot is directed inwards it is called
- 15- When the sole of foot is directed outwards it is called
- X 16- An example of a muscle present in the superficial fascia of the neck is
- X 17- An example of a muscle present in the superficial fascia of the upper limb is
- X 18- The muscle which is present in the superficial fascia of the scrotum is
- 19- The deep fascia forms sheaths around big vessels and nerves e.g.
Sheath in the lower limb and sheath in the head and neck
- X 20- Deep fascia forms for insertion of muscles of both sides in the middle line
- X 21- An example of a muscle of which its tendon passes under a fibrous pulley is

-
- 22-** Epiphysis of bone is covered with
 - 23-** An example of pneumatic bone is
 - 24-** A bone embedded in a tendon is called bone
 - 25-** The largest sesamoid bone in the body is
 - 26-** An example of uniaxial joint is
 - 27-** An example of biaxial joint is
 - 28-** An example of polyaxial joint is
 - 29-** An example of plane synovial joints is

MODEL ANSWERS

- 1- Anatomical position
- 2- Median (sagittal) plane
- 3- Coronal plane
- 4- Anterior
- 5- Posterior
- 6- Medial
- 7- Lateral
- 8- Flexion
- 9- Extension
- 10- Adduction
- 11- Abduction
- 12- Supination
- 13- Pronation
- 14- Inversion
- 15- Eversion
- 16- Platysma
- 17- Palmaris brevis
- 18- Dartos muscle
- 19- Femoral sheath and carotid sheath
- 20- Median raphe
- 21- Digastric muscle
- 22- Articular (hyaline) cartilage
- 23- Maxilla or sphenoid bone or ethmoid bone or frontal bone
- 24- Sesamoid bone
- 25- Patella
- 26- Elbow or superior radioulnar or ankle
- 27- Knee or wrist joint
- 28- Hip or shoulder joint
- 29- Superior tibiofibular and the joint between the articular facets of vertebrae
